

Email communications meeting entity ethical challenges and privacy compliance

Summary

CyphraTek™ is an email toolkit that has added advanced patented technologies to provide services beyond a simple email exchange. As a solutions provider, CyphraTek™ has partnered with legal entities to ensure ethical and compliance challenges are exceeded. This partnership provides an opportunity to exchange email in a private protected manner between legal providers and those they are providing service to and exchanging with.

Challenge

Legal entities both large and small are routinely challenged during case administration to keep information private. Emails between recipients must be sent, delivered, and documented in compliance with all legal ethical and bar related requirements. These challenges can result in heavy fines, extended litigation, delayed settlement resolution, and loss of practice license.

Solution

CyphraTek's @SecureTrack email services provide proof of sending, delivery confirmation, and a time and date stamped original as a trusted third party. In addition, CyphraTek's technology is patented in the United States, Canada, and Europe. Our platform provides: who read it, when they read it, on what device they read it, and where they were when it was read.

Results

Today CyphraTek @SecureTrack is the legal services email process that can manage all the email records and make case management a snap. Our email service provides mandatory deliverability following legal guidelines and receipt reporting better than or equal to USPS certified mail. CyphraTek's expeditious processing enables administrators to focus on new business and less on administering the email processing.
