## Feature

- Launch phishing email simulation campaigns using realistic templates (credential theft, invoices, CEO fraud)
- Rule-based policies with automatic training triggered on click, reply, or credential submission
- Preconfigured automatic training scenarios (new employee onboarding, periodic refresh after 6-12 months, high-risk users, etc.)
- Large training materials library including short, focused training lessons, quiz, option to upload user materials
- Built-in Ability allows admins to create unique training videos using advanced AI techniques
- Track click rate, report rate, repeat offenders, and improvement over time
- Convert real blocked or quarantined emails into safe simulation templates for training
- One-click AI training launched directly from quarantined emails
- AI explains why the email is risky using the exact message the user interacted with
