

Trustifi Collaboration Shield

Trustifi Collaboration Shield extends protection beyond email to Microsoft Teams, OneDrive, and SharePoint.

Organizations share files, links, and sensitive information across collaboration platforms every day. Trustifi helps secure those interactions with the same visibility, detection, and control customers already trust for email security.

Why Collaboration Security Matters

Today's threats don't stop at email.

Sensitive data is shared across Teams chats, OneDrive folders, SharePoint sites, and collaboration workspaces. Malicious links, risky sharing activity, and unauthorized access can create security and compliance gaps that traditional email security can't see.

Trustifi Collaboration Shield helps organizations protect how employees communicate and collaborate.

What Collaboration Shield Delivers

Visibility Across Microsoft 365

See who shared content, where it was shared, and who has access across Teams, OneDrive, and SharePoint.

Protect Sensitive Data

Detect PII, PCI, PHI, and custom data classifications across collaboration environments.

Detect Modern Threats

Identify malicious links, risky sharing activity, and threats that move beyond the inbox.

Automated Response

Restrict risky files, disable dangerous sharing links, and enforce security policies automatically.

Investigation and Audit Readiness

Track activity, review events, and maintain a complete audit trail from a single platform.

What Customers Say

"Organized and straightforward: the wizard's role in Trustifi deployment is well-streamlined. Deployment of Trustifi for both Google and M365 environments is unmatched by any other vendor I've used."

– NOC Engineer, IT Services Industry

Built for MSPs

One Platform Instead of More Tools

Manage email and collaboration security from a single vendor.

One Console for Every Client

Centralized visibility and management across customer environments.

Stronger Microsoft 365 Protection

Expand security coverage beyond email without adding operational complexity.

Scale Without Additional Overhead

Support more customers without adding tools, portals, or administrative burden.

Key Capabilities

- Collaboration Visibility
- Data Loss Prevention (DLP)
- Threat Detection
- Automated Remediation
- Policy Enforcement
- Investigation & Audit Trails

Why Organizations Choose Trustifi

Trustifi makes enterprise-grade email security easier to deploy, manage, and scale. The platform integrates seamlessly with Microsoft 365, Gmail, and Outlook without requiring complex infrastructure changes.

Customers consistently highlight Trustifi's:

Ease of deployment

Intuitive interface

Strong detection with minimal false positives

Responsive onboarding and support

Protect Clients. Simplify Compliance. Grow with Confidence.

With Trustifi, MSPs can deliver comprehensive email security that stops evolving threats, ensures compliance, and reduces operational overhead. By combining detection, training, and compliance into one AI-powered solution, Trustifi gives providers a competitive edge and their customers greater peace of mind.
